

**I. Answer the following questions:**

[5 x 2 = 10]

1. Prove the following identities:  $\tan^4\theta + \tan^2\theta = \sec^4\theta - \sec^2\theta$
2. Prove the following identities:  $\frac{1 - \tan^2\theta}{\cot^2\theta - 1} = \tan^2\theta$
3. Prove that  $\sqrt{\frac{1 + \cos\theta}{1 - \cos\theta}} = \operatorname{cosec}\theta + \cot\theta$
4. Find the angle of elevation of the top of a tower from a point on the ground, which is 30 m away from the foot of a tower of height  $10\sqrt{3}m$ .
5. A road is flanked on either side by continuous rows of houses of height  $4\sqrt{3}$  m with no space in between them. A pedestrian is standing on the median of the road facing a row house. The angle of elevation from the pedestrian to the top of the house is  $30^\circ$ . Find the width of the road.

**II. Answer the following questions:**

[3 x 5 = 15]

6. If  $\sin\theta (1 + \sin^2\theta) = \cos^2\theta$ , then prove that  $\cos^6\theta - 4\cos^4\theta + 8\cos^2\theta = 4$
7. If  $\frac{\cos\theta}{1 + \sin\theta} = \frac{1}{a}$ , then prove that  $\frac{a^2 - 1}{a^2 + 1} = \sin\theta$
8. The top of a 15 m high tower makes an angle of elevation of  $60^\circ$  with the bottom of an electronic pole and angle of elevation of  $30^\circ$  with the top of the pole. What is the height of the electric pole?

-----ALL THE BEST-----

Test should be written under the supervision of your parents and get the answer paper signed from them.

No corrections should be made after the test timings. We expect your honesty.

Test Papers have to be submitted after the completion of all the 4 tests.

Submission Date of Test Papers: 1<sup>st</sup> June, 2<sup>nd</sup> June, 3<sup>rd</sup> June

Timing: 9 AM – 12.30 PM / 5 PM- 7 PM
